

INDO-PACIFIC GEOINTELLIGENCE FORUM 2023

THE ADAPTATION OF GEOSPATIAL KNOWLEDGE INFRASTRUCTURE CONCEPT IN DISASTER MANAGEMENT

By

Colonel Norazlin bte Pamuji

Assistant Director

Geospatial Defence Division

Department of Mapping and Survey Malaysia

GEOSPATIAL KNOWLEDGE INFRASTRUCTURE

Geospatial Knowledge Infrastructure provides a blueprint, is imperative to integrate geospatial data and technology into the wider digital ecosystem, and to place geospatial at the heart of knowledge co-creation

MALAYSIA DEFENCE GEOSPATIAL INFORMATION MANAGEMENT (DGIM) ARCHITECTURE

INFRASTRUCTURE

DATA SOURCES

GEOSPATIAL KNOWLEDGE INFRASTRUCTURE IN DISASTER MANAGEMENT

1

- Access to basic connectivity infrastructure (broadband, telecommunication services).
- A range of efficient data collection, storage and analysis services (sensors, modelling, digital platforms, cloud-based storage and processing, software systems for managing and processing data to yield actionable insights)
- An effective regulatory environment (interoperability rules, data quality standards, norms or regulations on data ownership and data privacy)

2

- Greater analytical support for precision farming
- Better understanding of risk factors (climate change, disasters etc.)
- Higher revenue generation and cost recovery through enhanced agricultural productivity.
- Better resource management through predictive analytics related to future yields, thereby reducing wastage and improving profits.
- Evaluation of economic impact on agricultural land and crops.

6

- Provides opportunity to adopt time-saving and cost reducing technologies

3

- Bring more innovation and technology in the sector at much a faster rate.
- Greater efficiency through task automation.
- Development of appropriate skills in the sector

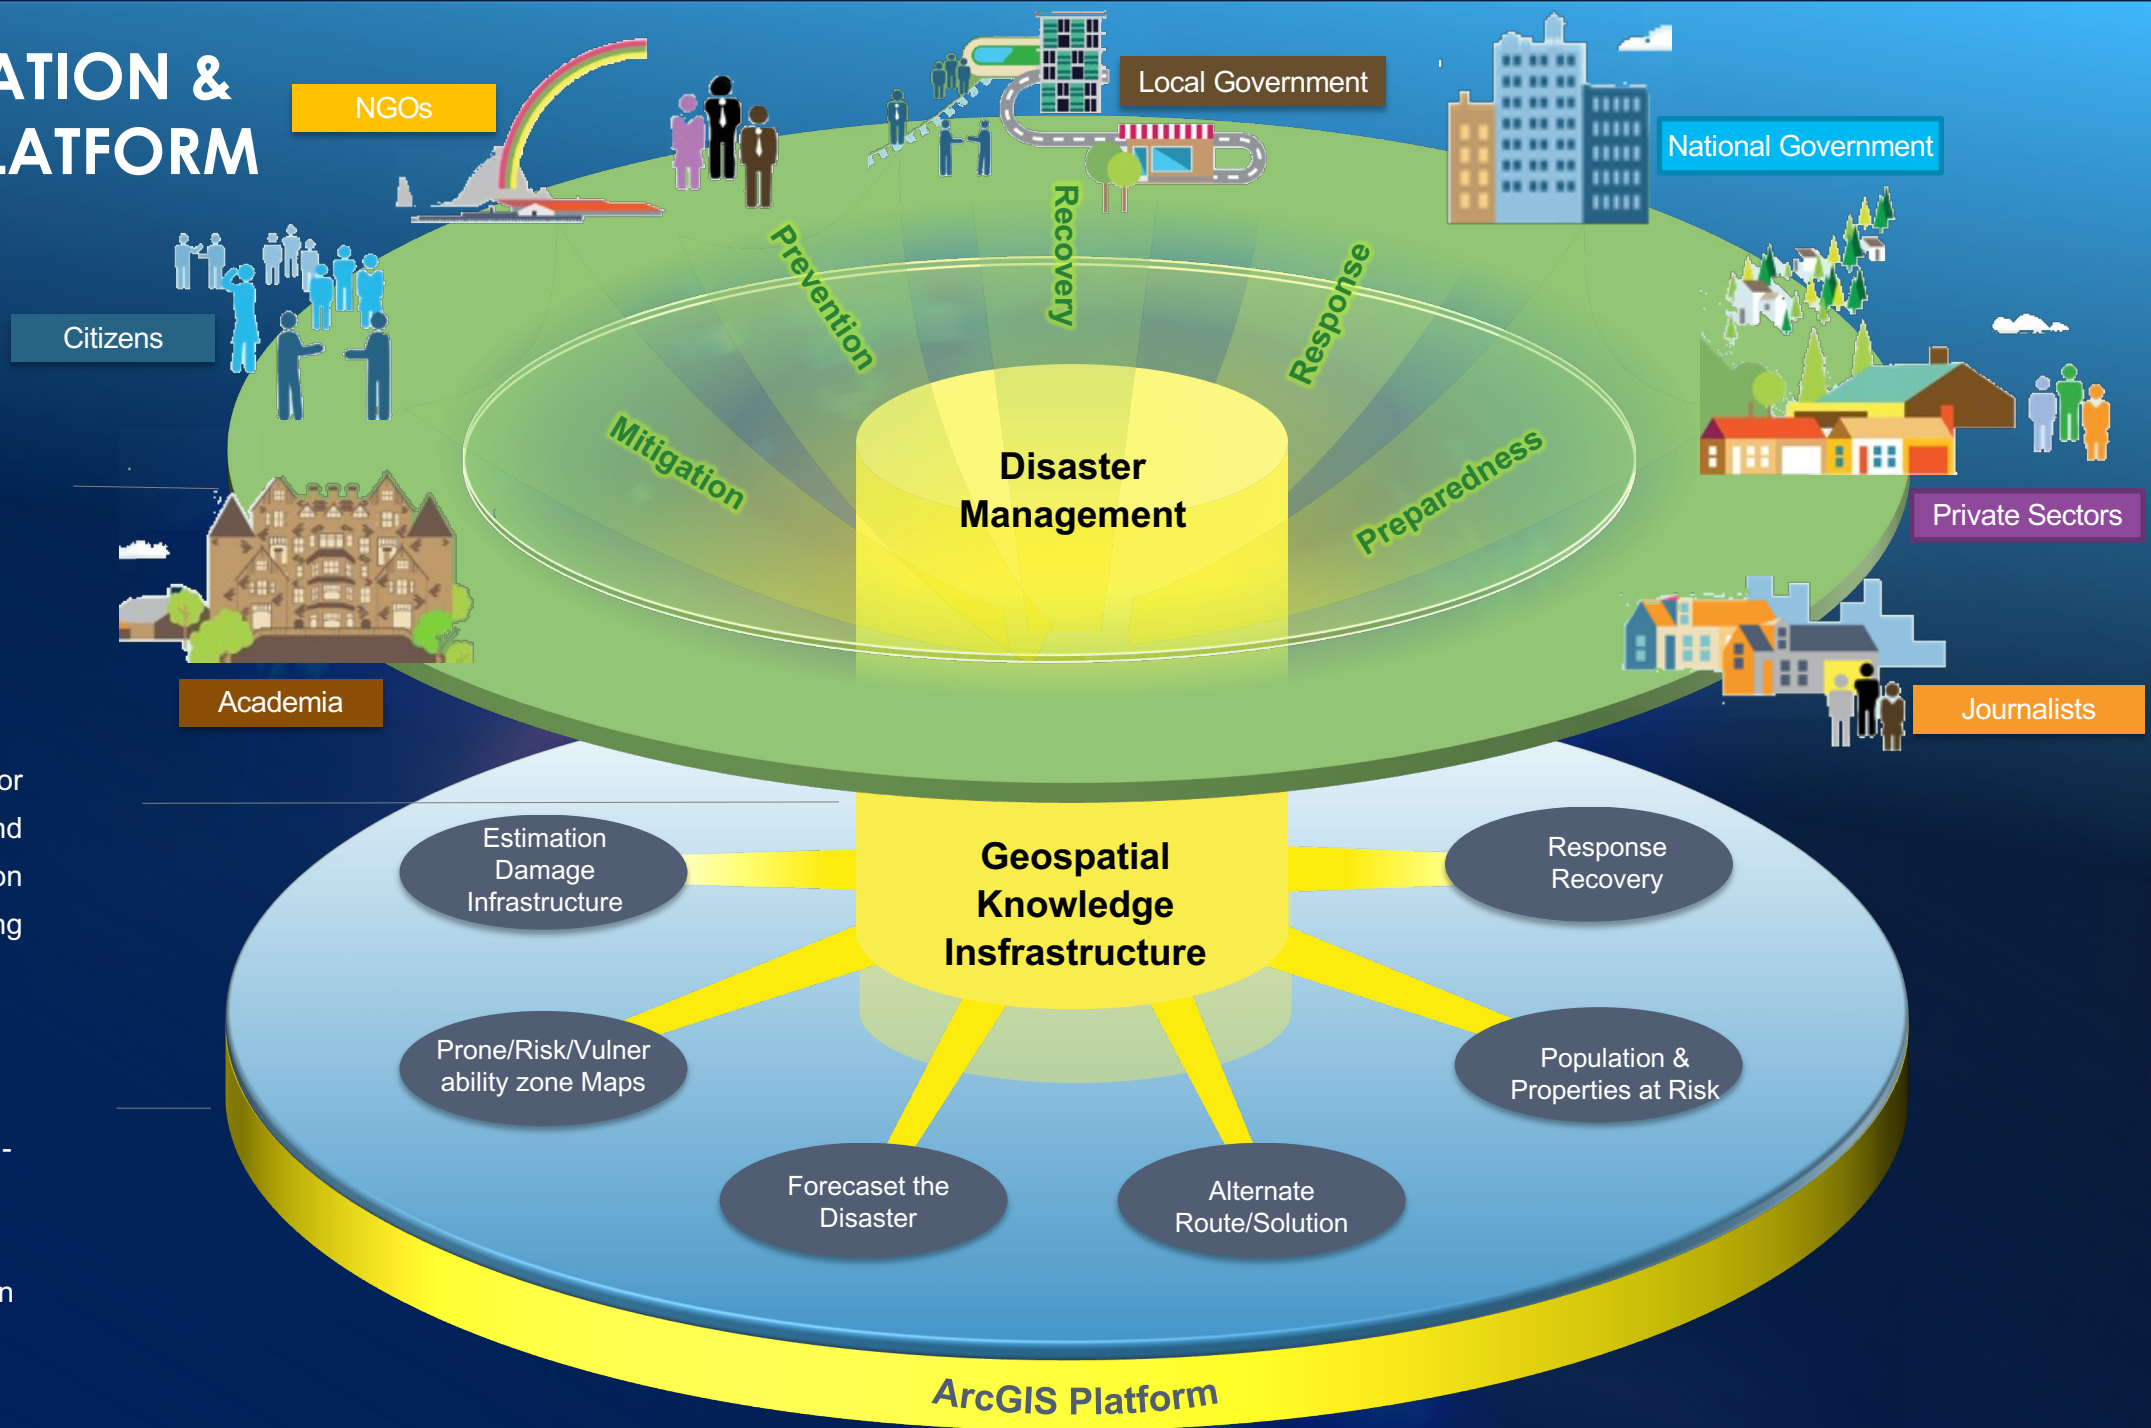

5

- More accurate support for decision –making and efficient farm management.
- Greater access to geospatial agricultural services and data provided by government agencies.
- Facilitates the re-use of administrative data to support services to farmers.

4

- Increased interaction between government agencies, private companies, data providers and data users to explore ways to pool data.
- Enhanced framework governing agricultural data creation and data access.
- Enable private sector investments.

COLLABORATION & SHARING PLATFORM

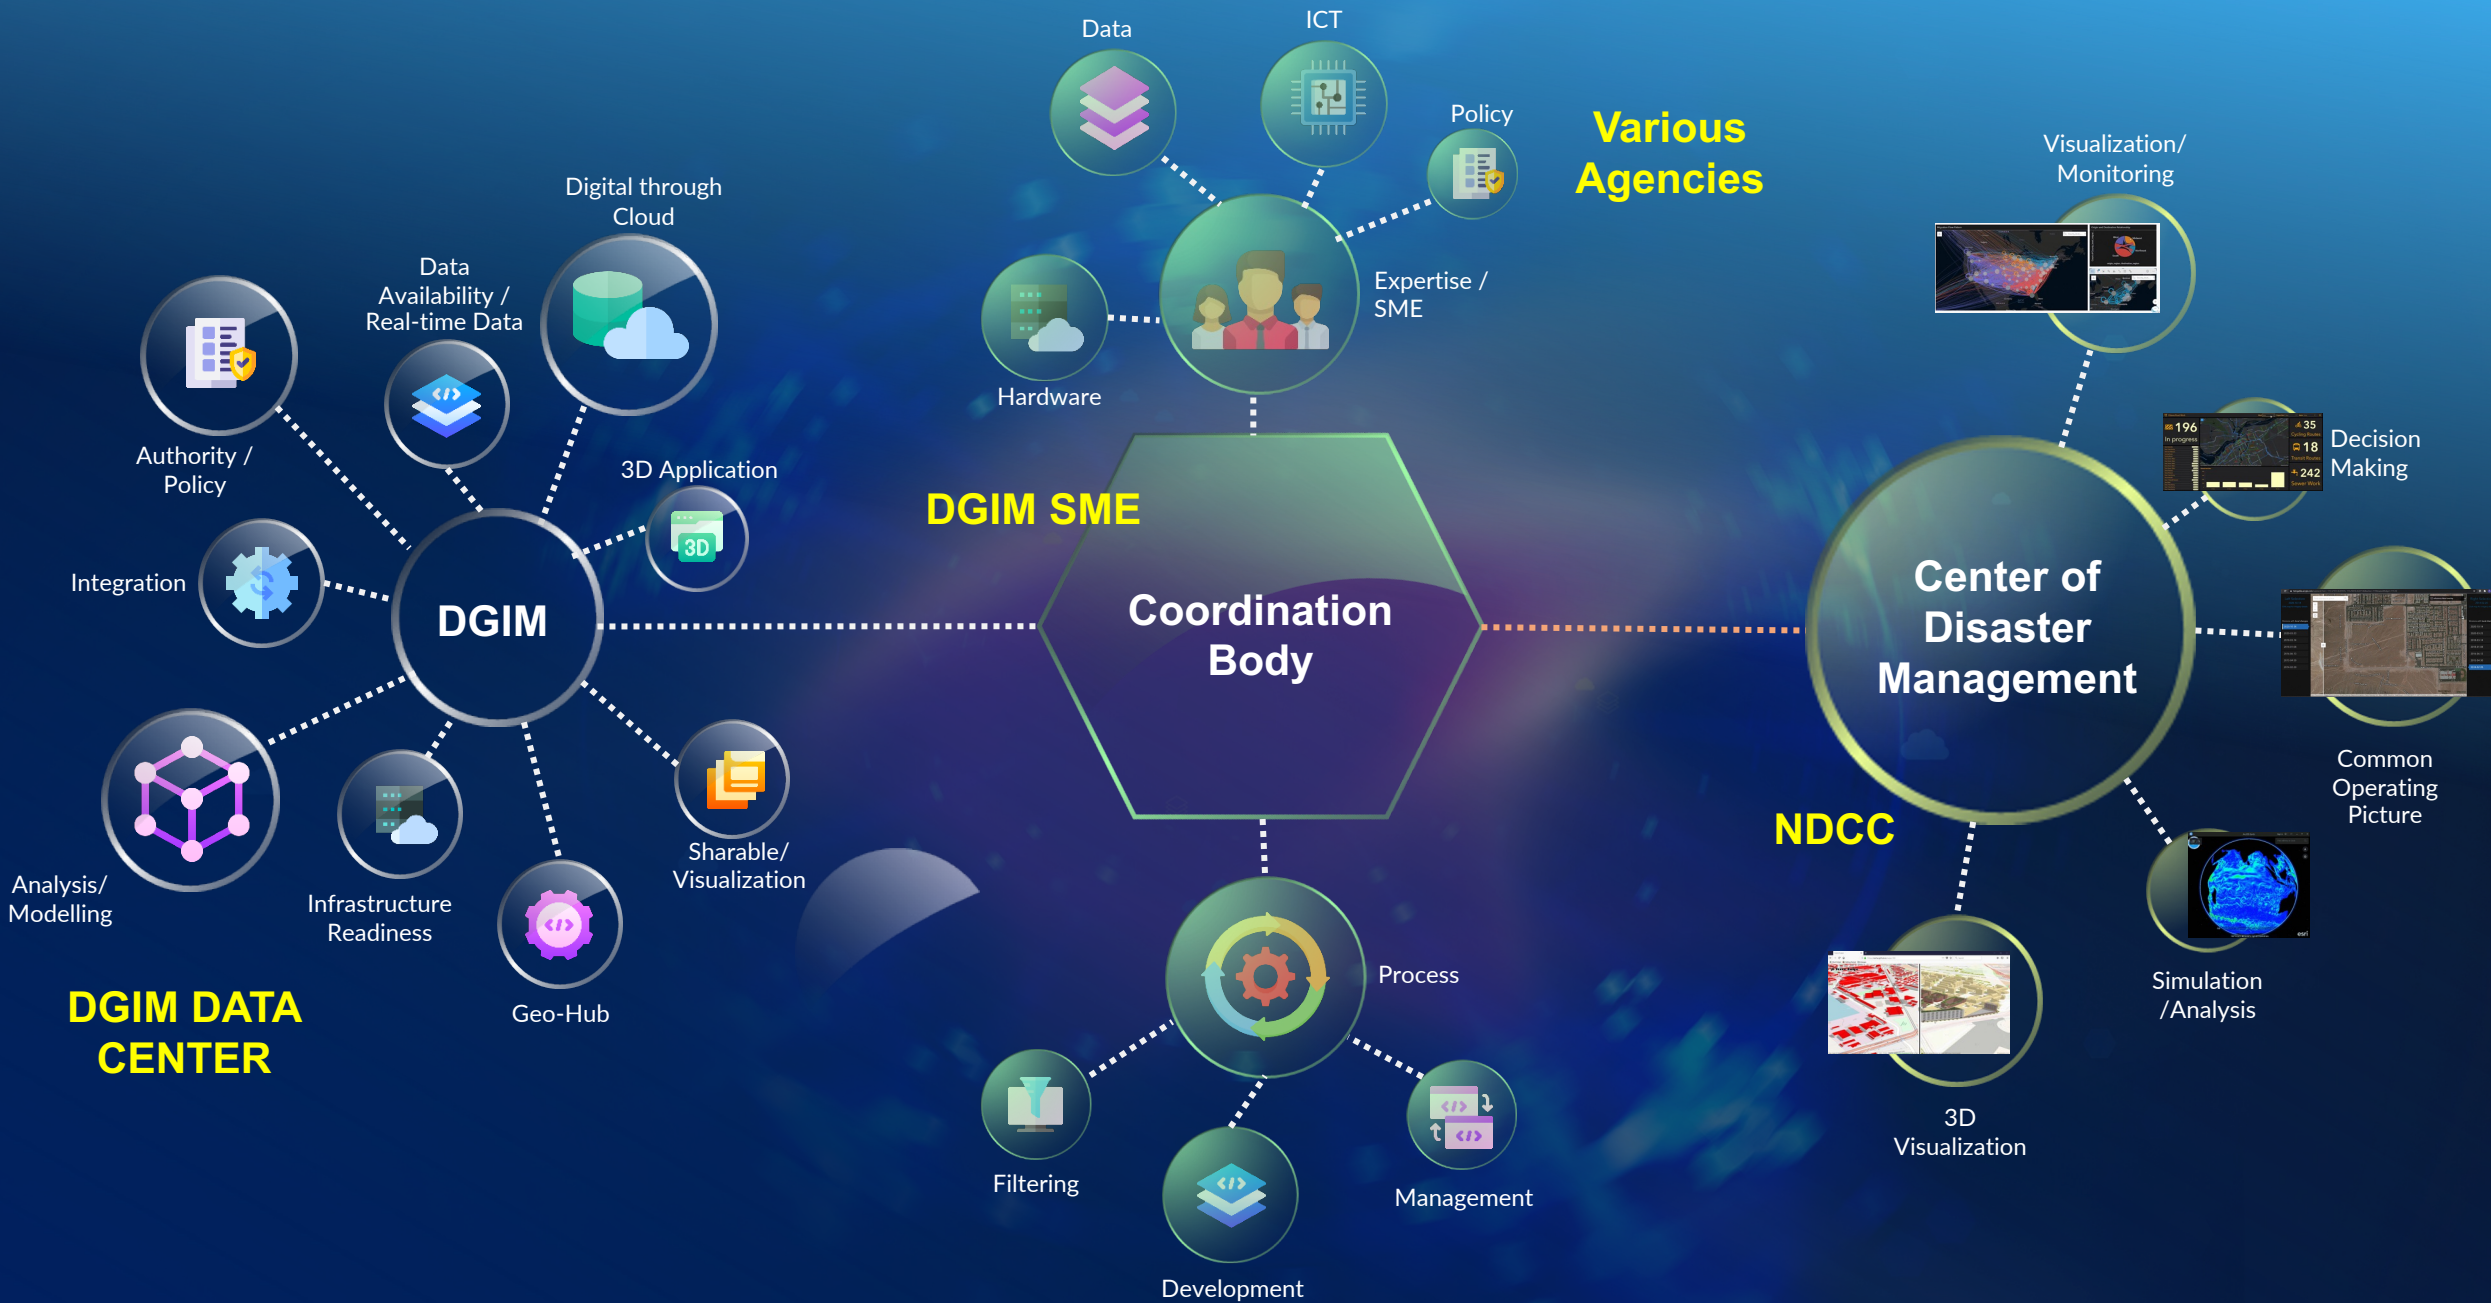

Public engagement platform, powered by services and open data

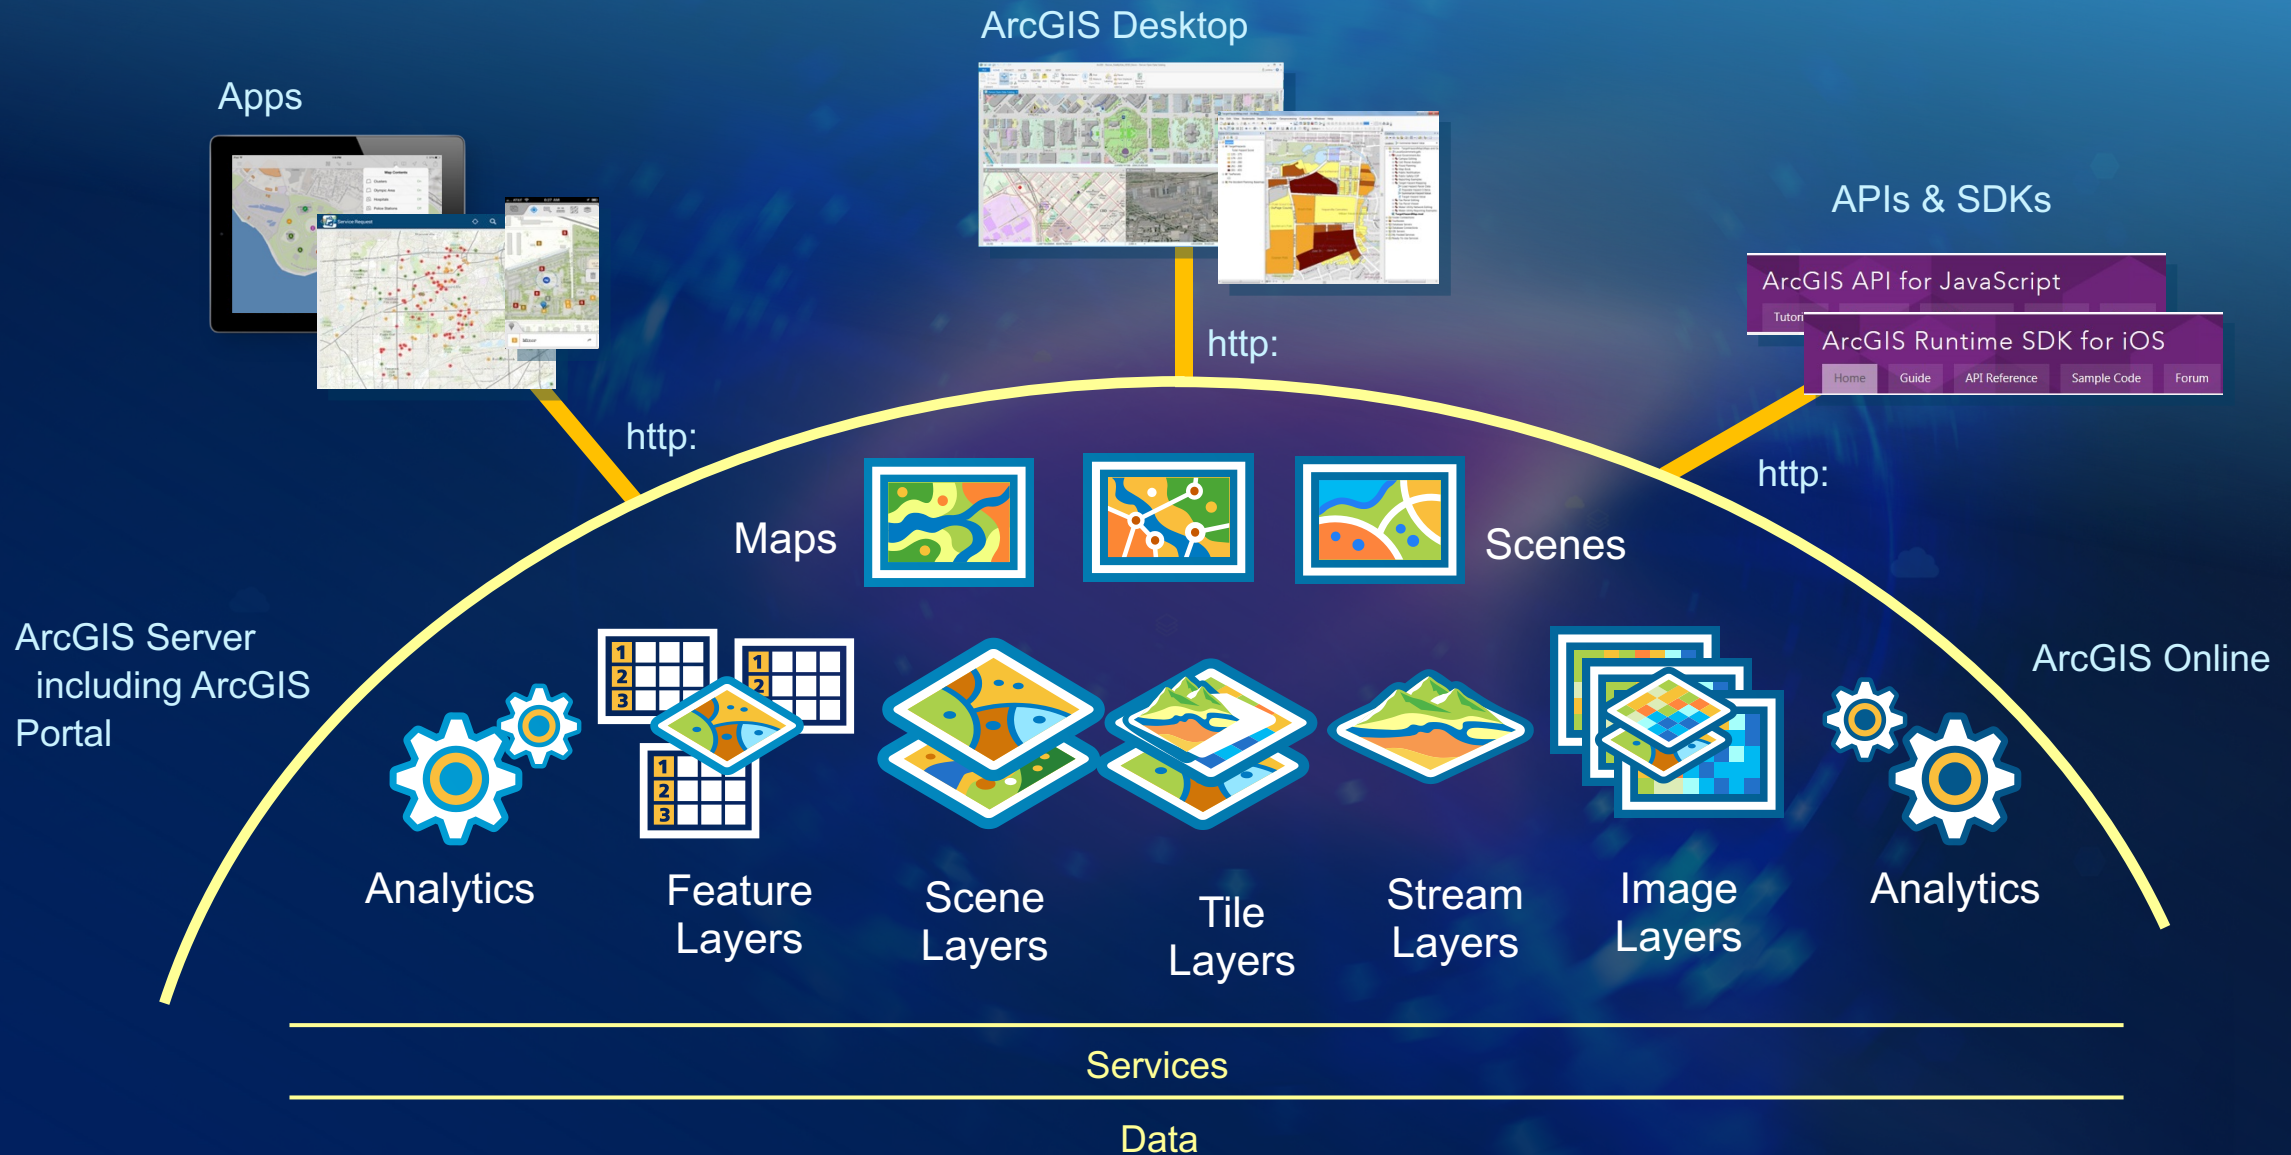

Administrative tools for making data, services, and apps available for decision making process during disaster/emergency

Platform for sharing all kinds of data (spatial, non-spatial, sensor/IoT, 3D, BIM) and for cross-departmental collaboration

DGIM CONCEPT IN DISASTER MANAGEMENT

GEOSPATIAL KNOWLEDGE INFRASTRUCTURE IN DISASTER MANAGEMENT FRAMEWORK

DGIM SERVICES IN DISASTER PHASES

BEFORE

Joint Common Operating Picture (J-COP)

Shared Situational Awareness – Agencies / Social Media / Open Source

System integration from other agencies related

Monitoring by Drone Fleet Commander System

DURING

Collecting data using other social media

Collecting data from the people - crowdsource

Field Reporting Data – MAF / Agencies

Visual J-COP Disaster Apps + Drone Fleet Commander System

AFTER

GIS Apps – Profile / Dashboard

Damage Assessment – ML / AI / Full Motion Video

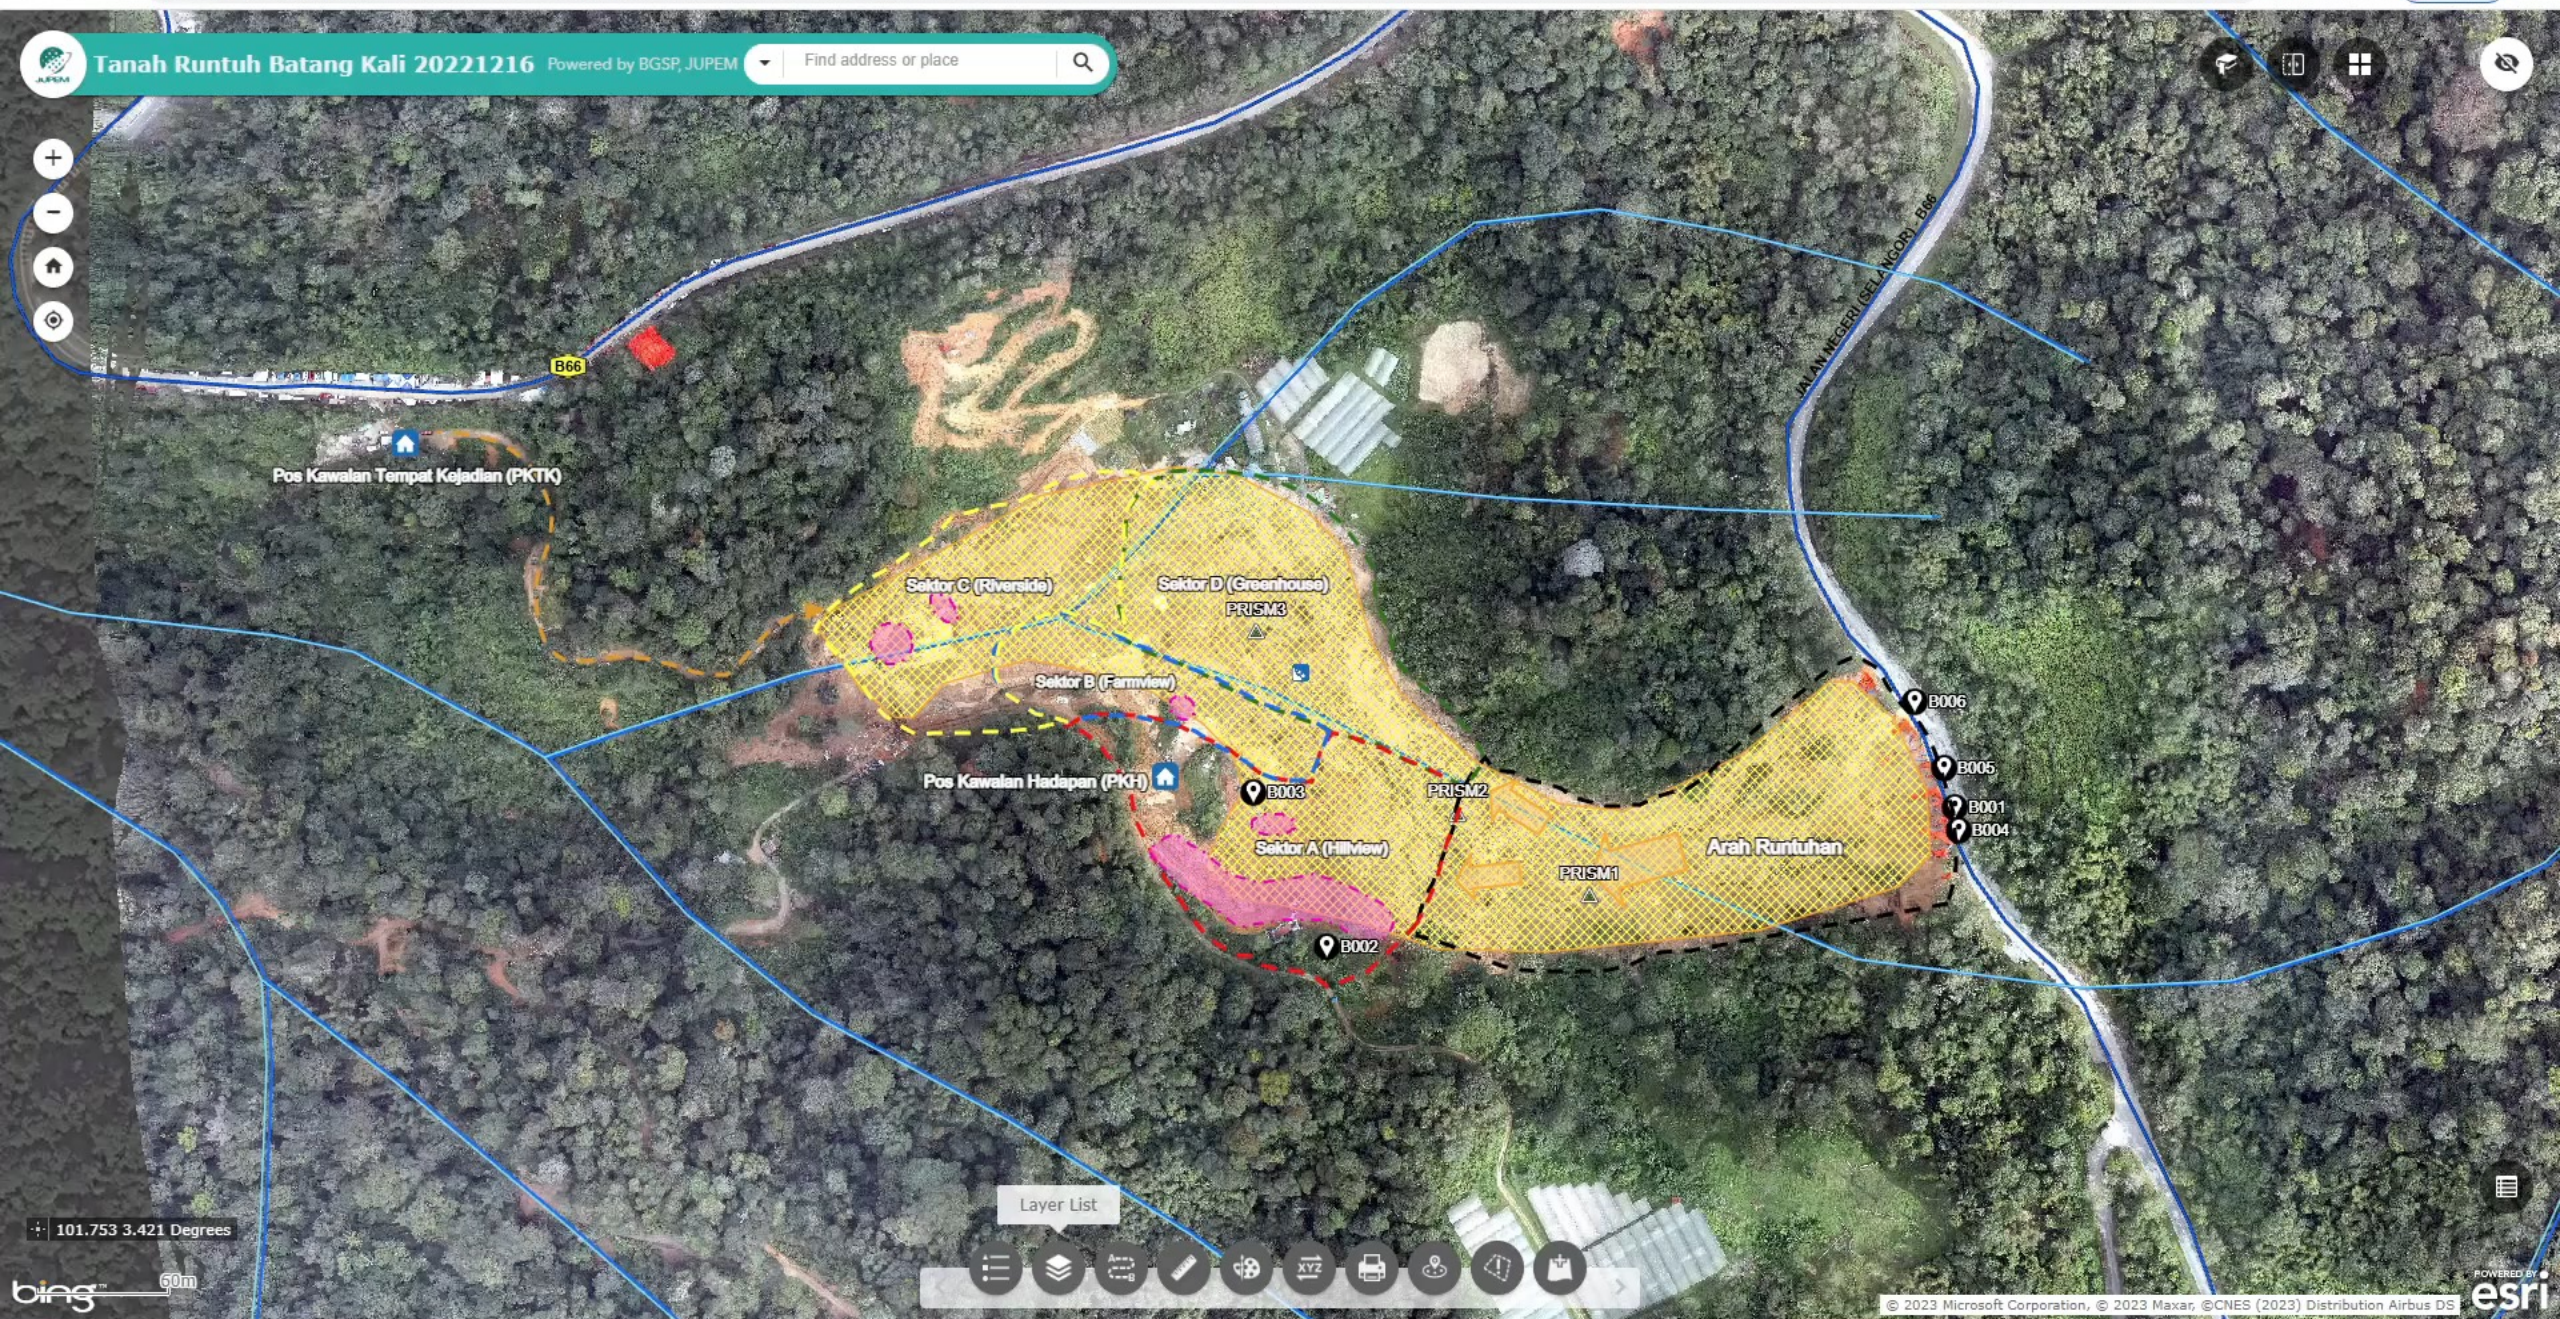

Mapping Product - UAV & Satellite Imagery

Public Social Support

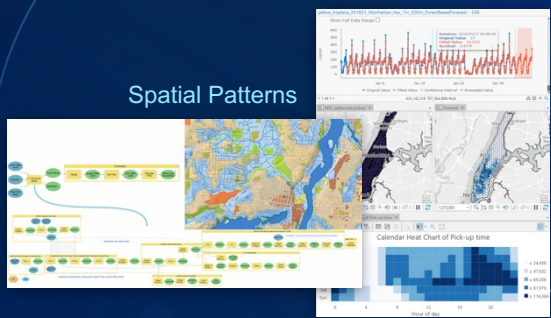

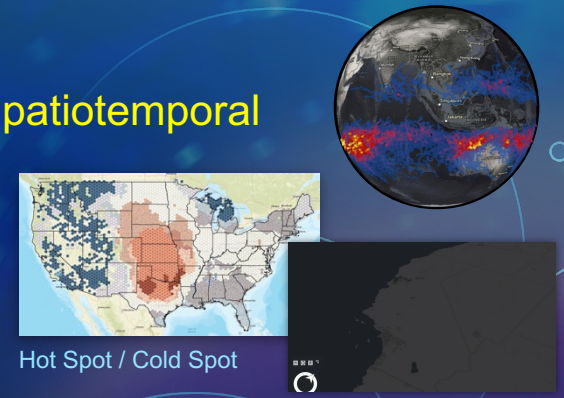

FUTURE TECHNOLOGY DEVELOPMENT FOR DISASTER MANAGEMENT

Creating new Insight and Understanding

Predictive Modeling

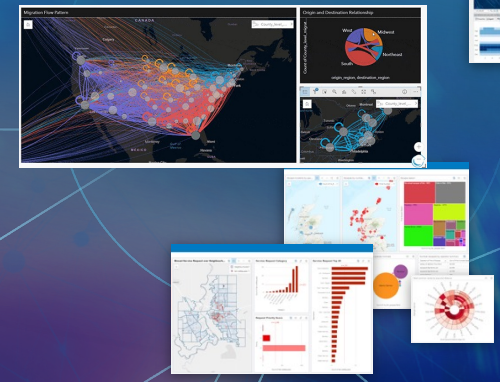

Spatiotemporal

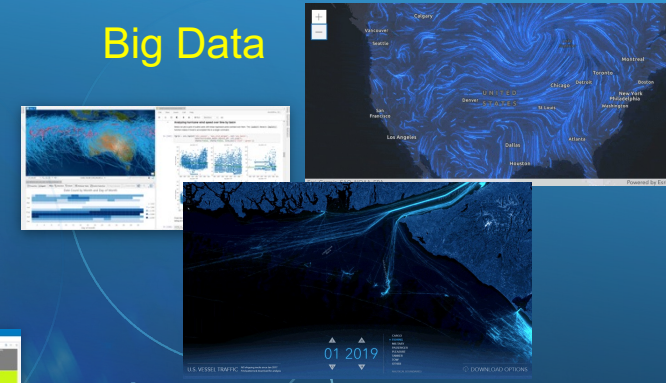

Real-Time

Interactive Visual Analytics

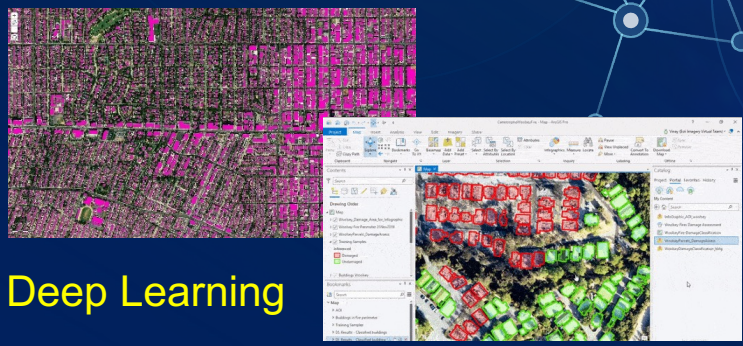

Big Data

Imagery & Raster Analytics (In the Cloud)

Deep Learning

GeoAI

Leveraging Many Technical and Scientific Innovations

CONCLUSION
